FEDERAL HIGHWAY ADMINISTRATION

VERTICAL CLEARANCE LOG

The Vertical Clearance Log is prepared for the purpose of providing vertical clearance restrictions by route on the primary road system. This report is used by the Iowa Department of Transportation's Motor Carrier Services to route oversize vehicles around structures with vertical restrictions too low for the cargo height. The source of the data is the Geographic Information Management System (GIMS) that is managed by the Office of Research & Analytics in the Performance & Technology Division. The data is collected by inspection crews and through the use of LiDAR technology to reflect changes to structures on the primary road system. This log is produced annually and is available to the public for a fee.

A brief explanation of the column headings that appear on each page of the log are as follows:

Route Under Structure – This is the signed primary route number that travels under a restriction considering only the direction of the route across the state (west to east or south to north)

Route Over Structure – This is the route that creates the restriction over the traveled primary route

Vertical Clearance – This column refers to the minimum vertical clearance over the roadway of the primary route

Location – Approximate location of the restriction

County – Name of the county in which the structure is located

Reference Post – This is the value of the green milepost the driver has most recently passed while traveling on the primary route. The decimal value is the offset in miles past the reference post. It may appear that some reference posts don't follow a sequential order throughout the route; that is because in most cases, the most significant route is posted along multiple concurrent routes. Therefore, the lower priority route will not be posted. The mileage is still accumulating on the lower priority route and when the route concurrency stops, the posting should resume in a sequential order.

Maintenance Bridge Number – This number is assigned by the Office of Bridges and Structures within the Iowa Department of Transportation for record keeping purposes. The number is assigned by route within each county to all structures defined as a bridge according to the Code of Iowa. The code states that all structures of more than 20 feet (6.1 meters) between the undercopings of abutments or extreme ends of openings for multiple boxes are considered to be a bridge.

FHWA – The Federal Highway Administration identification number for each structure

NOTICE

The State of Iowa (STATE) and the Iowa Department of Transportation (IDOT) hereby disclaim any warranty of any kind, express or implied, in reference to the information contained herein. The STATE and IDOT neither assume nor authorize any person to assume for the STATE or the IDOT any liability in connection with the information contained herein, and there are no oral agreements or warranties regarding the information contained herein. Each and every person is hereby notified that the vertical clearances specified herein are subject to change due to resurfacing, surface buckling, weather conditions, or any other event.

It is the responsibility of each and every vehicle operator to ascertain whether sufficient ACTUAL vertical clearance exists to move his/her vehicle or motor vehicle between the roadway, underpasses, and bridges listed herein.

The May 1st date on this report reflects the end of the update schedule for the previous calendar year. Any vertical clearance restrictions which could or may change after this date will not be reflected in this report.

For the latest information on vertical clearance restrictions, please contact the Office of Motor Carrier Services at (515) 237-3264 or visit the following website:
